

# *Duke Energy Citrus County, Florida*

***Duke Energy Taps B&W Energy Services for Citrus County Plant Cleaning***

*B&W Energy Services has mobilized to Citrus County, Florida to perform AquaLazing and Steam Blow services for Duke Energy's plant expansion. This is the latest in a series of pre-commissioning cleaning projects Duke Energy has chosen B&W to execute due in large part to our excellent performance record. Construction of the new 1,640-megawatt combined-cycle natural gas plant in Citrus County began in 2014 and is expected to cost \$1.5 billion.*

*B&W has built a reputation as the industry leader in pre-commissioning cleaning services including its specialized AquaLazing, an advanced high-pressure water jetting process which effectively cleans piping systems of mill-scale, construction debris, and loose deposits. AquaLazing from B&W is a highly sought-after alternative to other cleaning methods because it reduces costs and cleaning duration while producing zero environmental impact.*
