

Lotte Chemical Expansion Southwest Louisiana

B&W Energy Services is partnering with South Korea's Lotte Chemical Corp. and LACC LLC, a subsidiary of Axiall Corp. on a long-planned, \$3 Billion project in southwest Louisiana. B&W was contracted to support the entire scope of engineering and pre-commissioning services, touching nearly every system in the plant.

With full construction now under way, LACC's ethane cracker complex and Lotte's associated monoethylene glycol (MEG) plant remain on schedule for startup in early 2019. Previously slated to have a production capacity of 600,000 tpy, the MEG plant—now will be able to produce 700,000 tpy of MEG for export to destinations in Europe and Asia.
