

NOVEC Energy Production Halifax County, Virginia

NOVEC began preliminary construction work on a 49.9 megawatt "green" biomass power plant in Halifax County, VA. One of the significant attributes of this facility is that it will be "carbon neutral." In other words, it does not add any more carbon dioxide to the environment beyond what is released through natural decomposition of slash.

B&W Energy Services was chosen to perform our engineered chemical cleaning services, steam blow services, lube oil flushing and high-pressure AquaLazing services for this unique biomass power project. As a global provider of pre-engineering and pre-commissioning cleaning services, this is another example of B&W's diversity, project knowledge base and teamwork development.
