

Zachry Barnesville, Georgia

Rollcast Energy's 53.5-megawatt (MW) Piedmont Green Power project will combust about 500,000 tons of wood waste per year, including logging residue and urban wood waste. Rollcast recently selected Texas-based Zachry Industrial, Inc. to engineer, procure and construct the facility.

B&W Energy Services was chosen by Zachry Industrial, Inc. to perform our engineered chemical cleaning, engineered hydro-testing and engineered steam blow services for this innovative biomass power project. As a global provider of pre-engineering and pre-commissioning cleaning services, this is another example of B&W's diversity, project knowledge base and teamwork development.
