

Kpone IPP Thermal Power Plant Ghana, Africa

Image Credit: Construction Review Online

B&W Energy Services partnered with PIC Energy to perform their pre-commissioning chemical cleaning, steam blow services and Aqualazing at this 340 megawatt plant in West Africa. The KIPP will be the largest private IPP in the country, accounting for over 13% of its dependable capacity.

B&W was selected by the EPC, Group 5, to work alongside PIC Energy at this Combined Cycle Gas Turbine plant, which will be amongst Ghana's most fuel-efficient thermal power stations. B&W Energy Services continues to add unique and impactful projects to our portfolio, and this is one reason our clients continue to trust our organization with their projects' success.
