B&W Energy Services is performing Aqualazing services for Spanish EPC Técnicas Reunidas on KNPC's Al-Zour refinery, after a successful partnership with Técnicas Reunidas at Al-Ahmadi, just 30 minutes away. Técnicas Reunidas is engineering and constructing the processing units at Kuwait National Petroleum's new Al-Zour refinery. To be built with the capacity to produce 615,000 barrels per day, it will become the largest refinery in the Middle East.

Técnicas Reunidas' 45-month contract includes three crude distillation units, three atmospheric residue desulfurization units, three diesel hydrotreating units, two naphtha hydro-treating units, two kerosene hydrotreating units, a saturated gas unit and a heavy oil cooling unit.

The Al-Zour refinery represents a capital investment of US \$13 billion and is the third refinery installation of Kuwait's Clean Fuels Project. The B&W Energy Services team is working with several other organizations to complete the pre-commissioning for the refinery, which is scheduled to begin work in the summer of 2019.
