

Jackson Generation Energy Center

Elwood, Illinois

B&W Energy Services is proud to announce one of our latest ongoing projects, Jackson Generation Energy Center. The new 1,200 megawatt combined cycle power plant is located just South of Chicago, Illinois and will generate enough power to support 1.2 million residential homes. B&W performed aqualazing and air blowing services on this project, and is providing lube oil flush and steam blow equipment in support of startup of this state-of-the-art power generation facility. We are grateful to partner with Kiewit Power Constructors again to provide our unmatched pre-commissioning services and contribute to another successful plant startup.
