

Calcasieu Pass LNG

Louisiana, USA

B&W Energy Services recently completed work on the Calcasieu Pass LNG Project in early 2022. The \$5.8B project spans more than 1,000 acres in Southern Louisiana and will produce 10 million metric tons per year from 18 liquefaction trains. The facility also has an integrated 700 megawatt 5x2 combined cycle power island with an additional 25MW aeroderivative gas turbine. B&W was selected by EPC contractor, Kiewit, to perform engineered air blow and AquaLazing services for multiple systems on this large-scale project. B&W is thankful for the opportunity to again work with Kiewit, and continue building on the success of many projects completed together over the years.
