

Al-Zour Refinery Project

Al-Zour, Kuwait

B&W Energy Services is excited to announce the completion of our work on the Al-Zour Refinery Project, a plant in Al-Zour, Kuwait owned by KIPIC. Upon completion, the refinery will be one of the largest in the world, able to process 615,000 barrels of oil per day. The new refinery uses high-tech systems to produce ultra-low sulfur diesel fuels, helping protect the environment while adhering to strict environmental standards.

We were contracted by FDH JV to perform engineered steam blow services, amine degreasing, aqualazing of compressor systems and lube oil flushing for utilities areas and support process units. We also supported TSH JV to perform engineered lube oil flushing, amine degreasing and aqualazing of compressor systems for the main process units. Through our highly engineered processes, we were able to pull back project schedule while delivering numerous clean systems ready for plant start-up. B&W is one of the leading precommissioning service providers in the world, and our team is made up of the most experienced and knowledgeable experts in the field. We are proud to bring our expertise to our partners in Kuwait and support these mega projects.
