

Channelview Petrochemicals Complex

Texas

B&W completed pre-commissioning services on a large-scale, new construction project along the Houston ship channel. The specialty petrochemicals facility is the largest of its kind in the world and will produce chemicals used for manufacturing a range of textile and construction products, as well as high-octane gasoline components.

B&W was hired by the plant owner and construction contractor, Zachry Industrial, to support several pre-commissioning scopes including hydro-testing support, chemical cleaning of auxiliary boilers and oxygen systems, high-velocity lube oil flushing of pumps and compressors, AquaLazing and steam and air blowing of piping systems. We are honored to have been given the opportunity to support this important project.
