

Next Wave Energy Partners' Project Traveler

Texas

Just down the road from B&W Energy Services in Pasadena, Texas sits Next Wave Energy Partners' new alkylate production facility, Project Traveler. B&W contracted to Clough Group to perform multiple services at the facility, including engineering services, lube oil flushing, AquaLazing and providing specially-designed equipment.

Once complete, the facility will have a capacity of 28,000 barrels per day of alkylate and will help meet the growing demand for cleaner-burning gasoline. The site will have the ability to consume pure feedstock, avoiding many constraints found in refinery alkylation while producing some of the highest-quality alkylate products on the continent. B&W is proud to be working on this project and we look forward to future partnerships with the Clough Group.
