

B&W Expands Plant Capabilities

Texas

B&W Energy Services is proud to be performing pre-commissioning services, including air blows, pigging, AquaLazing and lube oil flushing of pumps and compressors, at a multi-billion dollar expansion project in Texas.

The expansion project will add an alpha olefins unit, capable of producing 350,000 tons of linear alpha olefins a year, and a performance polymers unit, capable of producing 400,000 tons of Vistamazz-branded polymers a year, to the already extensive complex. B&W contracted to conduct pre-commissioning services on the site, one of the largest integrated petrochemical complexes in the nation, and looks forward to continued partnership.
