

# LAO Chemical Expansion Project

## Texas

B&W Energy Services is proud to be performing pre-commissioning services, including engineering, air blowing, pigging, AquaLazing and lube oil flushing, on a mega chemical expansion project in Texas.

The \$2 billion expansion project will add a linear alpha olefins unit, capable of producing 350,000 tons of linear alpha olefins a year, and a performance polymers unit, capable of producing 400,000 tons of polymers a year, to the already extensive complex. B&W contracted to conduct pre-commissioning services on the site, one of the largest integrated petrochemical complexes in the nation, and we look forward to continued partnership with the plant owner and supporting their growth objectives.
