

Beaumont Polyethylene Expansion ExxonMobil Chemical

B&W Energy Services has been chosen to continue work for ExxonMobil Chemical's Beaumont Polyethylene Expansion (BPEX) under EPC Zachry Industrial by way of engineering, AquaLazing, and chemical cleaning services. As the project continues, B&W's team is working to further propel the project into startup at full capacity.

The Beaumont polyethylene plant will increase capacity by 65 percent, or approximately 650,000 tonnes per year, to meet the growing demand for high-performance plastics.

The Beaumont expansion project will employ 1,400 construction workers and create 40 permanent jobs upon completion, as well as generate \$20 billion in economic activity in the first 13 years of operation, based on 2015 Impact Data Source estimates.
