

Georgia Pacific Naheola Mill Pennington, Alabama

B&W Energy Services is executing chemical cleaning, steam blowing and Aqualazing services at the Georgia Pacific Naheola Mill in Alabama. Our team is working with TIC (The Industrial Company) for the project—after a fruitful and long-standing relationship with TIC/Kiewit, we are excited to further provide results for them and the Owner. This project, our second in Alabama, is an exemplary turnkey multidimensional service package.

The client is building a utility plant inside the paper mill—by adding a new biomass-fueled boiler and a 40MW steam turbine package to the existing plant. The project will provide a foundation for the company's position in the paper products market. In addition, it will improve the mill's environmental footprint and create a platform for future advancement.
