

NorthStar Energy Services *Baytown, Texas*

B&W Energy Services is performing chemical cleaning and air drying for NorthStar Energy Services' butene and ethylene processing facility, known as "the Raven," in Baytown, Texas. The project, owned by Raven Holding Company, LLC, broke ground in April 2017.

Butene is used in the manufacturing of a variety of base chemical products. While it is a co-monomer for production of polyethylene (LLDPE and HDPE), the Raven facility is designed for dedicated, on-purpose production and ethylene processing. B&W's involvement in chemical cleaning and air drying will help meet NorthStar Energy Services' needs, as there is significant growth in the polyethylene and associated markets.

NorthStar Energy Services provides integrated structures in the oil and gas, pipeline, chemical, petrochemical, power and terminal industries. B&W's partnership with NorthStar helps to construct the facilities needed to transport and process energy resources nationwide.
