

AES Alamitos & AES Huntington Beach

Los Alamitos & Huntington Beach, California

B&W Energy Services successfully completed Aqualazing on two short deadline projects located in Huntington Beach and Los Alamitos, California. Working in collaboration with Kiewit, B&W Energy Services was hired as the solution to a critically needed quick response to meet startup deadlines on the projects owned by AES California. Known for quick mobilization, B&W Energy Services supported the projects by completing the required cleaning on the energy centers, keeping AES California and Kiewit on schedule, avoiding the risk of unnecessary costs. The Huntington Beach Energy Project (HBEP) and the Alamitos Energy Center (AEC) are currently under construction and projected to be lower-profile, more efficient and modernized natural gas power plants replacing the existing AES Huntington Beach and AES Alamitos Generating Station. B&W's team was equipped to respond quickly to Kiewit's request, distributing teams to California and successfully completing Aqualazing execution.
