

# *Nikiski Power Project Kenai Peninsula, Alaska*

*B&W Energy Services provided our professionally engineered Chemical Cleaning, Lube Oil Flushing, AquaLazing, Steam Blow and Steam Cleaning services for the Nikiski Combined Cycle facility. The facility is considered the cornerstone of Homer Electric Association's Independent Light program, which provides locally produced power for the Kenai Peninsula.*

*B&W was contracted by CH2M Hill to successfully complete the pre-commissioning cleaning services. In addition to steam blowing the plant system, the ACC unit was also successfully cleaned using steam. The success of this project contributed to our excellent working relationship with CH2M Hill and the Homer Electric Association of Alaska.*
