

Celanese Pasadena, Texas

Celanese Limited, along with Worley Parsons as the EPC, added a new methanol unit at the Pasadena Clear Lake organic chemicals and ethanol plant. The new unit will increase the capacity by 1.3M metric tons per year of methanol.

B&W Energy Services contracted with Celanese directly to perform the pre-commissioning cleaning services required for this fast-paced project. B&W Energy Services, as a full turnkey provider, completed air blow, oil flushing, chemical cleaning, steam blowing, and AquaLazing services, all of which were completed on time with the fast-tracked schedule. The project finished with zero safety incidents, which was greatly acknowledged by the client. The new methanol unit will utilize abundant, low-cost natural gas in the U.S. Gulf Coast region as a feedstock and will benefit from the existing infrastructure at Celanese's Clear Lake facility.
