

Lilama 18 Ha Tinh Vietnam

B&W Energy Services was chosen by Lilama 18 JSC to perform engineered steam blow services for their new coal-fired power project.

This once-through power boiler required high-pressure exhaustive steam blows, utilizing our quick opening 900psi gate valves at pressures up to 1000psi to achieve effective cleaning velocities prior to startup. B&W Energy Services continues to add successful projects to our portfolio, and this is one reason our clients continue to trust our organization with their projects' success.
