

Shell Prelude Pre-Engineering

Shell's Prelude Floating LNG Production Facility is the largest in the world. B&W Energy Services was proud to have been chosen by the Samsung Heavy Industries and Technip consortium to provide the Pre-Engineering for the Pre-Commissioning Cleaning Services that will be required for this innovative project. Due to the complexity and confined space, the pre-engineering phase became a top priority.

Pre-engineering and pre-planning are the cornerstones of forward-thinking corporations with a proven track record for success. B&W was honored to be a part of this endeavor.
