

PIC GROUP FORD MOTOR COMPANY Dearborn, Michigan

Photo by Matthew Messner

B&W Energy Services was contracted by PIC Group to perform several pre-commissioning services on Ford Motor Company's Research and Engineering Center. The center is part of Ford Motor Company's campus in Dearborn, Michigan.

The Research and Engineering Center upgrade is a prominent part of Ford Motor Company's headquarters campus renovation. The center, planned to span across 4.5 million square feet, will house 24,000 employees. B&W is performing chemical cleaning, steam blowing and AquaLazing services for the new combined heat and power plant as part of the renovation.

B&W Energy Services has built a strong relationship with PIC Group due to our proven track record in pre-commissioning execution and expertise—the Research and Engineering Center is the fourth project B&W has executed for PIC Group since 2016.
