

B&W Performs Chemical Cleaning in Canada

B&W Energy Services is proud to be working on a new 360-megawatt natural gas plant in the Saskatchewan province, Canada, named the Great Plains Power Station. It will provide reliable power for around 360,000 homes in Saskatchewan and support renewable power generation and coal retirements.

We provided chemical cleaning for an HRSG for the EPC contractor, Burns & McDonnell. We are grateful to have been given an opportunity to execute yet another successful chemical cleaning.
