

ORANGE COUNTY ADVANCED POWER STATION PROJECT

The Industrial Company (TIC) contracted B&W Energy Services to provide pre-commissioning services for the 1,215-megawatt Orange County Advanced Power Station (OCAPS) facility in Orange, Texas. Once complete, the combined-cycle power plant will produce enough electricity per year to power 230,000 Southeast Texas homes.

Our team is performing chemical cleaning services on the facility's two HRSGs, pipeline pigging services and air blowing services on the facility's gas systems, and AquaLazing on various systems.

B&W appreciates the opportunity to partner with TIC on a large power project again and to help bring electricity to thousands of Southeast Texans.
